A division of

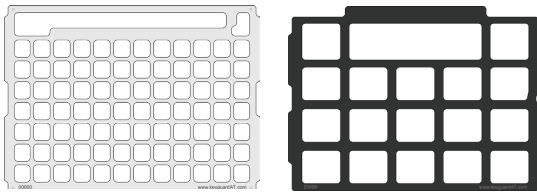

MARBLESOFT

Keyguards for Communication Apps

LAMP Words for Life, TouchChat, Proloquo2Go, TD Snap, GoTalk Now, Speak for Yourself, Grid for iPad and many more, including any app on any tablet (Smartbox, Accent, etc.)!

No other company provides keyguards that are customized for every individual user. You set the app the way you want it and we design a keyguard to exactly match what you see on the screen. Our keyguards are laser- or CNC-cut or 3D-printed to perfectly fit the device, no matter which case you are using.

We offer a variety of materials from an awesome non-glare PMMA-styrene in clear or opaque colors to the versatility of 3D-printed resins to **unbreakable polycarbonate with a lifetime guarantee**. Our snap-in attachment is the simplest, most effective, and most popular in the industry.

Keyguards for Keyboards, Laptops and Chromebooks

Apple, PCs, Chromebooks, BigKeys, Chester Creek, TTY, typewriters and much, much more.

We can make laser-cut keyguards for any keyboard. If it's a keyboard or device we haven't done before, you'll need to send us an identical device that we can measure and test fit. We'll return the device with the finished keyguard, usually within two days!

Keyguards for laptops and Chromebooks don't typically come with any attachment methods, because the device doesn't give us any room for an attachment. Since the keyguard fits exactly around every key, gravity holds them in place, and you can make them a little more secure with a bit of suction tape or Blu Tack.

Keyguards for normal keyboards often have similar constraints, but many have an optional added flange around the perimeter to give you a place to add an attachment. Keyguards for keyboards with full-height keys and oversized keyboards like the BigBlu are supplied with Velcro or Dual Lock fasteners that securely hold them in place. Keyguards for some half-height keyboards can also be secured with Velcro.

Keyguard AT keyguards for keyboards are available in a wide variety of materials.

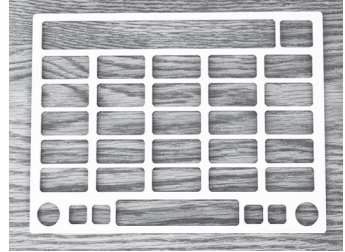

Many keyboard keyguards are available on our website, and if we haven't done one before, we can do it as a custom keyguard.

Temporary Keyguards

Not sure what layout would work best for your user? Want to try different configurations before you buy? Our temporary keyguards are our latest innovation unlike anything else you've seen in the industry.

Made from 1/8" foam board, they simulate the thickness of the final keyguard and provide an exact representation of the keyguard openings. Starting at just \$15.95, they are a great, inexpensive way to judge the effectiveness of a keyguard for your user. They work with any iPad case, or no case at all.

Purchase Orders

Communication apps contain a huge number of options and settings which affect the layout of the keyguard. To be sure we get all the necessary information, ***we require an official quote with your purchase order.*** Configure your keyguard at www.keyguardAT.com, then check out as if you were buying it. When you come to the payment section, choose "Quotation" and save the quote. It will be saved to our website and you will be given an order number to reference on the purchase order.

Purchase orders without an official quote are subject to a \$50 service fee to cover the time and expense of us calling and writing to you to figure out what you want.
